

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

Here is the step-by-step process to create a bootable Linux USB drive for Ubuntu and BalenaEtcher:

Step 1: Download the Linux ISO

First, you need to download the official operating system image file which also known as an ISO file

- Go to the official Ubuntu download page.
- Click the Download button for the latest long term support version.
- Save the .iso file in to the computer.

Step 2: Download and Install BalenaEtcher

Rufus is excellent but it is Windows-based only. Whereas, BalenaEtcher is cross-platform, simple and safely validates the drive.

- Go to etcher.balena.io
- Download the installer with current operating system and install it.

- Plug in USB drive into the computer.

Step 3: Create the Bootable USB Drive

Now, make the ISO image into the USB drive.

- Open BalenaEtcher.
- Click Flash from file and select the Ubuntu ISO file you downloaded earlier.
- Click Select target and choose your USB flash drive from the list.
- Click Flash! If you are on Windows or macOS, your system might ask for administrator permission to begin. Once granted, Etcher will format the drive, write the Linux files, and validate the success of the burn.

USB Boot in Linux

- Keep the USB plugged in and restart your computer.
 - As soon as the screen lights up, tap your computer's Boot Menu key repeatedly.
 - Select your USB drive from the boot list and you will be greeted by the Ubuntu installer!
3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

a. Change the desktop wallpaper

- Open Apple menu/System Settings.
- Click wallpaper in the sidebar.
- Select one of Apple's wallpapers or create a click Add Photo and choose your own image.

b. Change the system language to Hindi or Gujarati

- Open Apple menu/System Settings/General/Language & Region.
- Under Preferred Languages. Click the + button.
- Search for and select Hindi or Gujarati
- Click Add.
- Drag the language to the top of the preferred Languages list if it isn't already there.
- When Prompted. Click Restart Now to apply the language change system-wide.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

Here are the steps to create a new user account with login in Ubuntu as follows:

- a. Install Ubuntu either in VMware or VirtualBox.
 - b. During or after installation, create a user named gamer.
 - c. Enable automatic login:
 - Open Settings/System/Users
 - Unlock the settings with an administrator password.
 - Select the gamer account.
 - Enable Automatic Login.
 - d. Reboot the system.
 - e. At the login/lock screen, verify that the username gamer is displayed.
 - f. Take a screenshot:
 - In a VM: use the VM software's screenshot feature.
 - On a Physical machine: use a camera or Ubuntu's screenshot tools if the login screen is accessible.
5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.
